
Adessa
MIND
AQ Validation and Go-to-Market
$250K EARLY CLOSE | NOVEMBER 2026

We've proven people want Adessa. Now we're proving what it can do.

Adessa is building the premium destination for cognitive wellbeing, combining objective measurement, personalized noninvasive technologies, and a luxury wellness experience.

Following its oversubscribed Miami debut and the development of its AQ assessment platform, Adessa is seeking a $250k early financing close by November 30, 2026 to activate its Miami showroom and advance scientific and commercial validation.

EARLY-CLOSE CAPITAL TARGET

$250k

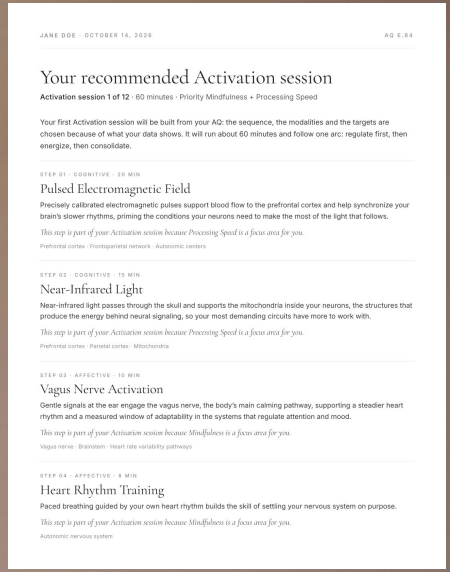

Funds Miami product validation showroom.

For the first time, an actionable baseline for cognitive wellbeing.

AQ doesn't just describe how your mind is performing today. **It is designed to inform what you do next – and measure what changes.**

MEASURE	EEG, HRV, Rapid cognitive testing and check-in inputs.
↓	
INTERPRET	A weighted, traceable AQ across eight cognitive and affective domains.
↓	
ACTIVATE	A personalized intervention plan matching measured patterns to relevant modalities.
↓	
REASSESS	Repeat measurement to examine change over time and refine programming.

The technologies exist. The opportunity is proving what works, for whom, **and how to change minds.**

The **Institute for Advanced Consciousness Studies has proposed a structured experimental program at Adessa's Miami showroom,** beginning with a standardized active-control cohort and continuing through individual technology evaluations against that reference.

1. Benchmark
Establish a standardized reference using a 20-minute active control.

2. Test
Evaluate candidate interventions with consistent pre/post measurement.

3. Determine
Identify measurable responses and inform inclusion in Adessa's protocols.

The study measures more than guest enjoyment. The proposed battery includes EEG, HRV, cognitive performance, self-reported mood and other psychological measures; technology response profiles are judged against a common benchmark, with a go/no-go recommendation.

VALIDATION QUESTIONS

Measurement: Does the AQ-related battery reliably detect meaningful cognitive and affective differences and changes?

Intervention: Which technologies or protocols produce measurable changes beyond the active-control benchmark?

Personalization: Can those findings lead to defensible recommendations that improve the consumer experience and inform future programming?

One operating showroom. Three critical validations.

MIAMI / WYNWOOD

2,000 SF
Short-term operating showroom*, in partnership with Fisher Brothers.

*Under LOI; subject to final agreement.

Scientific
Can AQ and Activation protocols generate interpretable, reproducible responses?

Service
Can guests understand the results, trust recommendations and experience measurable value?

Commercial
Will guests pay, return, convert into programs and recommend Adessa?
